CPC manufactures and sells carbon fiber reinforced plastic (CFRP) automotive parts. The facility is scheduled for operation in 2023.
- In May 2021, MCC and the Japan Steel Works, Ltd. jointly completed construction of a verification facility for mass production of gallium nitride (GaN) single-crystal substrates at the Muroran Plant of Japan Steel Works M&E, Inc. The aim is to conduct verification tests for mass production throughout FY2021 and start market supply from early FY2022.
- MCC has decided to construct a new Sugar Ester production line (an annual production capacity of 2,000 tons) at the Fukuoka Plant. MCC plans to launch operations in mid 2023.

Cash Dividends

MCHC's basic policy of returning profits to shareholders emphasizes enhancement of shareholder value by increasing the value of the Company. Therefore, using 30% of the medium-term level as a guideline for the consolidated dividend payout ratio, MCHC will make stable dividend payments, while maintaining sufficient internal reserves as resources to develop future businesses.

Based on this policy, net income attributable to owners of the parent for fiscal 2021 is expected to outperform our previously announced forecast. In light of this, MCHC decided at its Board of Directors meeting held on November 2 to set its interim dividend for fiscal 2021 at 15 yen, which is a hike of 3 yen from the previously announced forecast.

And we raised the year-end dividend forecast by ¥3 from the previous forecast, to ¥15. Accordingly, the forecast for the annual dividend will be increased by ¥6 per share from fiscal 2020 to ¥30.
